Introduction

The EDA Report provides exploratory data analysis information on objects that inherit data.frame and data.frame.

1.1 Information of Dataset

The dataset that generated the EDA Report is an 'data.frame' object. It consists of 20,000 observations and 21 variables.

1.2 Information of Variables

Table 1.1: Information of Variables

The target variable of the data is 'Default_ind', and the data type of the variable is character.

1.3 About EDA Report

EDA reports provide information and visualization results that support the EDA process. In particular, it provides a variety of information to understand the relationship between the target variable and the rest of the variables of interest.
